

Epson Document Capture Pro

DATASHEET

Here at Epson, we know that businesses of all sizes are finding now, more than ever before, that Document Management Systems (DMS) are the best way to integrate paper documents into their workflow. To help boost businesses' productivity, Epson is offering its own software package for free download.

Epson offers tailored solutions that meet companies' needs regardless of their size or IT capabilities – from small companies to large businesses. Document Capture Pro and Document Capture Pro Server are compatible with all common document management systems and cloud storage repositories, opening up a world of possibilities for businesses that need to digitize paper documents.

The client version, Document Capture Pro, can be used in a number of different ways with Epson's business scanners. From Workforce DS-30 mobile scanner for handling letters or order forms on customers' sites to GT-S85 high-performance scanners, and new Workforce DS A3 and A4 flatbed series, Epson solutions are perfect for converting multiple pages and large batches of paper into an electronic format.

Providing document management for business users, Document Capture Pro is ideal for the modern office. It is also compatible with the following WorkForce Pro Multifunction devices: WorkForce Pro 4525 DNF, WorkForce Pro 4595 DNF and WorkForce Pro 4515DN.

No special training is required to get started, as Document Capture Pro client has an intuitive interface which is quick to master. For ease-of-use they have advanced document imaging features and support all common file formats, including BMP, JPEG, TIFF, PDF and PDF/A.

Document Capture Pro Server addresses companies who are looking for advanced push scan functions and other Document Capture features on their shared devices without the need to install software on individual computers.

These versatile solutions suit everyone from the beginner to the advanced user, offering many scan-to-functions, including scan-to-cloud, FTP and Microsoft SharePoint®, with the ability to handle batch separation, barcode recognition and zonal OCR-A and OCR-B support. And, as Epson offers a self developer kit, you can add plug-ins to your DMS or cloud services to suit your business.
